

water tag everything you need to know

What's so special about Water Tag?

Water Tag is easy to run, completely mobile, competitive, suitable for all ages and the best part, it's amazing for the summertime when no one wants to leave the house because it's too hot out. For all clients who enjoy an action-packed combat experience like – Laser Tag, Archery Tag, Paintball, Airsoft, etc... - Water tag offers that without them thinking twice about the weather. In addition to the mobility, it can be played in any backyard, school, church, park, which has easy access to water. Instead of bringing all sorts of obstacles to build a play arena for other "tag" games. Here, you just need a smooth patch of ground/grass/turf, and you're set. It's simple to assemble and disassemble.

The cherry on top? It's affordable.

What makes it better than other water wars/combat activities?

The hands-on experience.

We give an objective to a water war. Rules, Point system. Just like in other "combat style" games, what makes it so interesting and fun is a good charismatic "Game Marshall". Someone who can take charge. Someone who knows how to hype up a crowd. The moment that there is a person running the activity, changing the scenarios, explaining what needs to be done, helping teams with strategies between each round. The clients experience becomes that much sweeter. Instead of giving them a few instructions at the beginning and letting them play for an hour without talking to them again. You give them an opportunity to regroup, take a break without missing game-play, and overall, have a much more fun time.

Oh, and don't forget to put on some good up-beat music to make things even more energetic!

What types of events are suitable?

Almost everything. Birthdays, corporate events, fixed arena, mobile... from 20 participants all the way to 100 all at once.

What locations are most suited for Water Tag?

Almost any place that has a connection to water nearby can be suitable. Churches, Schools, Backyards. On asphalt, grass or turf.

What locations should be avoided?

It's not recommended to do anywhere that might lead to a built up of mud (beaches, dirt), and also areas that are smooth and can lead to all the participants slipping while trying to play.

Maintenance and upkeep of gear?

To insure the longevity of the gear, make sure to re-Vaseline the rubber ring on the inside of the water launcher every 1-2 weeks. It protects it from cracking and drying out, and preserves it for more time.

It's recommended to close the clips of the water vest and tighten the straps at the end of each activity to protect the clips from snagging on other things while you store them.

Make sure at the end of an activity to let the barrels stand upside for a few minutes (if you have time) so that they can drip dry.
